At a glance

iTransport is Einstein Public School's bus app. It runs in the web browser on any phone or computer, so there is nothing to download. Everyone signs in with a username from the transport office and sees only their own part.

Who	What they see	What they do
Parent	Their child's bus on a map, with an arrival time	Follow the bus, mark trips Absent, get alerts
Driver	Their bus, and who rides from each stop	Slide to start a trip, slide to end it
Transport office	Every bus live, plus all the setup screens	Manage campuses, routes, buses, students and logins

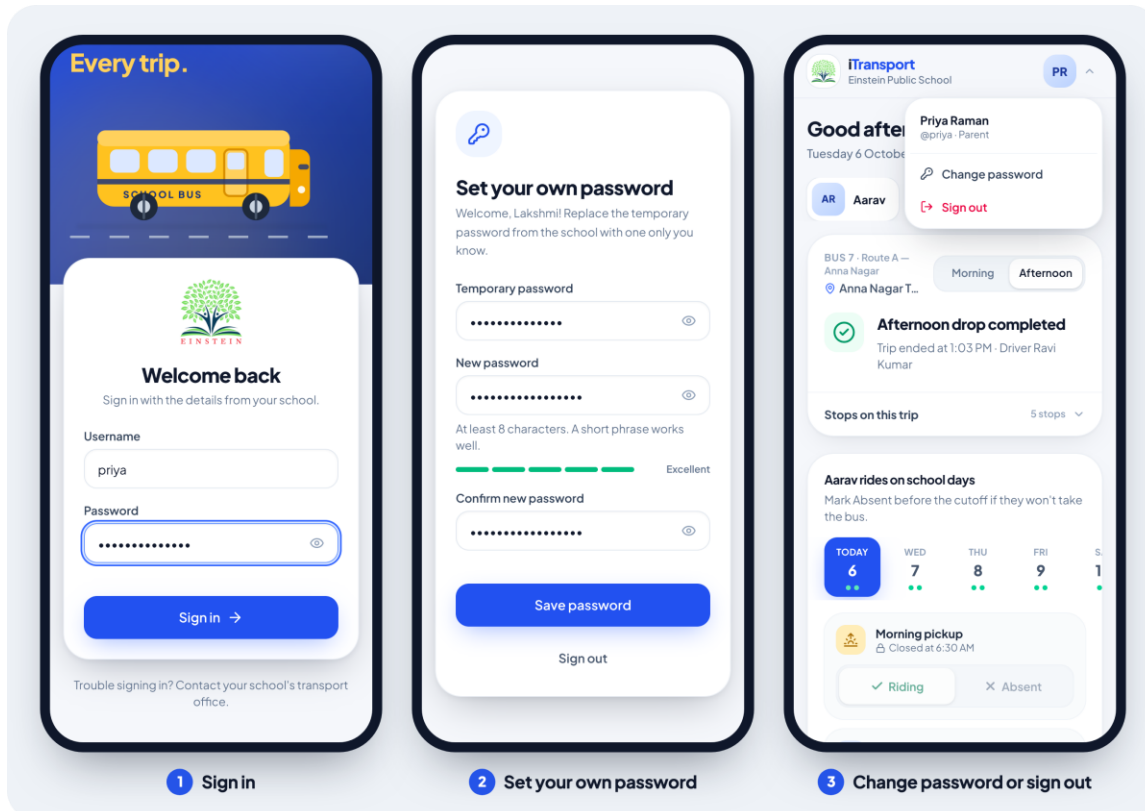

Students ride every school day unless a parent marks a trip Absent. The bus shares its location only between start and end of a trip. Location history is deleted after 30 days.

Getting started

Open iTransport in your phone's browser and sign in with the details the transport office gives you.

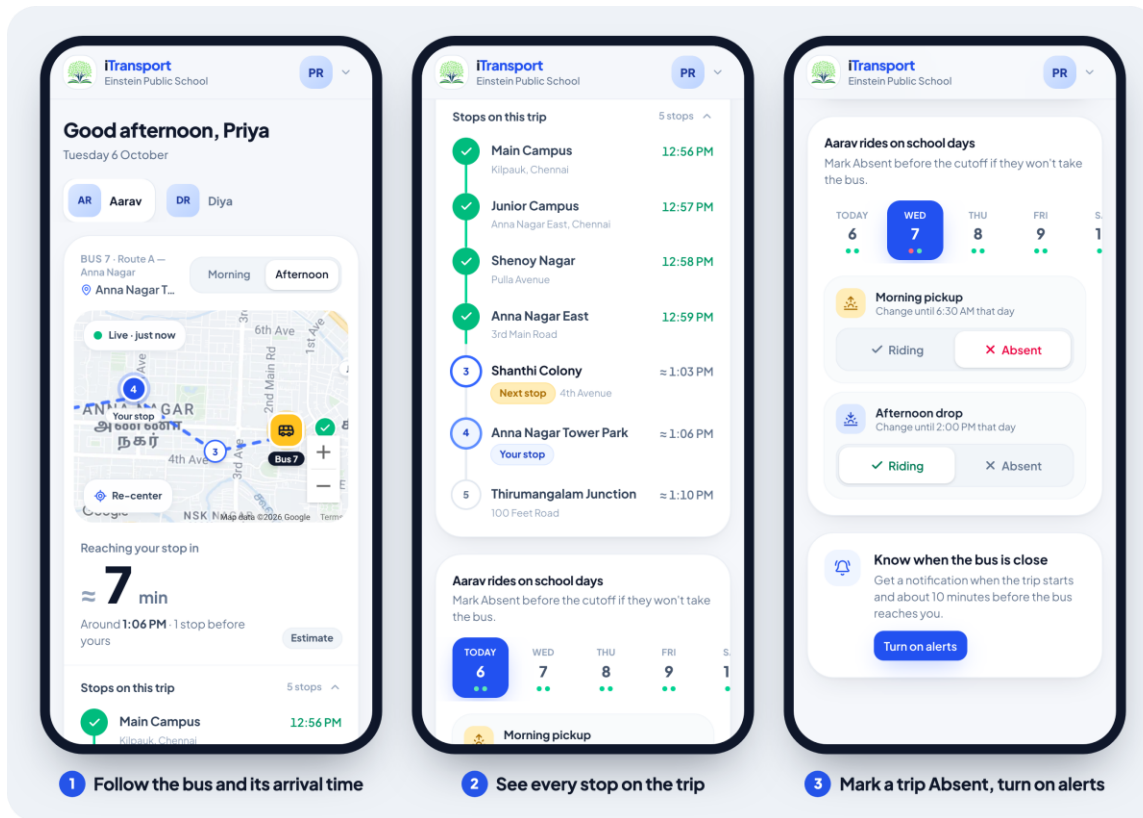

1. Open itransport-c24mykaktg-el.a.run.app in Chrome (Android) or Safari (iPhone).
2. Enter your **Username** and **Password** (the temporary one from the office), then tap **Sign in**.
3. The first time, choose your own password of at least 8 characters and tap **Save password**.
4. Add iTransport to your Home Screen so it opens like an app. On iPhone, tap Safari's **Share** button, then **Add to Home Screen**. On Android, open Chrome's **:** menu, then **Add to Home screen**.

- **Change password or sign out:** tap your initials at the top right. On the office screens on a computer, your name is at the bottom of the left menu.
- **Forgot your password:** ask the transport office for a new temporary password.
- **Locked out:** after 5 wrong passwords in a row, sign-in pauses for 15 minutes. A reset from the office unlocks it at once.
- You stay signed in on that device for 30 days.

Parents

Your home screen shows your child's bus, their stop and when the bus will get there. If you have more than one child, tap a name at the top to switch.

Follow the bus

- The bus card shows the morning trip until noon and the afternoon trip after that. Tap **Morning** or **Afternoon** to switch.
- Before the driver starts, the card says the trip hasn't started. After the start, it says the bus is getting ready (or waiting at the campus) until it sets off.
- When the bus is on its way, the map shows it live, marked **Live** with how fresh the position is. Below it you see **Arriving at your stop in 7 min** (morning) or **Reaching your stop in 7 min** (afternoon), the clock time, and how many stops come before yours.
- Then you see **The bus is at your stop**, followed by **Picked up at** and **Reached Main Campus at** in the morning, or **Dropped off at** in the afternoon.
- **Stops on this trip** lists every stop. Each one shows a tick and the time once the bus has been there, or **Next stop**, **Your stop**, or **Passed**.

Mark a trip Absent

Your child rides every school day unless you mark a trip Absent.

1. In the **rides on school days** card, tap the day. It shows the next 7 school days.
2. Under **Morning pickup** or **Afternoon drop**, tap **Absent**. The driver's list updates straight away.
3. To undo it, tap **Riding**.

Each trip shows its cutoff, such as "Change until 6:30 AM". After the cutoff, or once the bus has left, the trip is locked. If plans change after that, call the transport office.

Turn on alerts

Tap **Turn on alerts** and allow notifications. On iPhone, first add iTransport to the Home Screen and open it from there; the card shows the steps.

Alert	Sent when
Bus 7 is on its way	The driver starts a morning trip
Bus 7 has started the drop-off	The driver starts an afternoon trip
Bus 7 is about 10 min away	The bus is that close to your stop (the school sets the minutes)
Bus 7 reached Main Campus	A morning bus reaches your child's campus

Tap **Send a test** to check that alerts arrive. Alerts skip any child marked Absent for that trip.

Drivers

Run each trip from one phone on the bus: start the trip before you set off, keep iTransport open while you drive, and end it after the last stop. Before you leave, put the phone in a mount and on a charger.

1 Pick the trip, then your bus

2 Check who rides, slide to start

3 Drive; slide to end at the finish

1. Choose **Morning pickup** or **Afternoon drop**, then tap your bus. It shows **Ready to start**, **You're driving** or **Completed today**.
2. Check the list. The **Riding** and **Absent** totals are at the top, then each stop with its students. Absent students are crossed out.

3. **Slide to start trip**, and allow location if the phone asks. Parents can now see the bus.
4. Drive with iTransport open on screen. The top strip should read **GPS ±8 m, Sharing live** and **Screen on**. The big card shows the **Next stop**, its arrival time and how many students ride there, and turns green with **At stop** when you arrive. Stops tick off by themselves, so there is nothing to tap.
5. After the last stop the card says **All stops done**. When everyone is off, **Slide to end trip**. Location sharing stops.

If you leave the page during a trip, open iTransport again and tap the green **Trip running** card to go back to it.

If you see	Do this
Location is blocked	Allow location for this site in the phone's settings, then reopen the page
Keep this screen open, or Location was paused	Keep iTransport on screen; sharing stops while the phone is locked or another app is open
Weak signal	Nothing; saved updates send by themselves when the signal returns
Your phone's clock looks wrong	Turn on automatic date and time in the phone's settings
The GPS signal is too weak	Keep the phone near the windscreen, with a clear view of the sky
Stop order switched	Nothing; the trip now follows the order you are driving

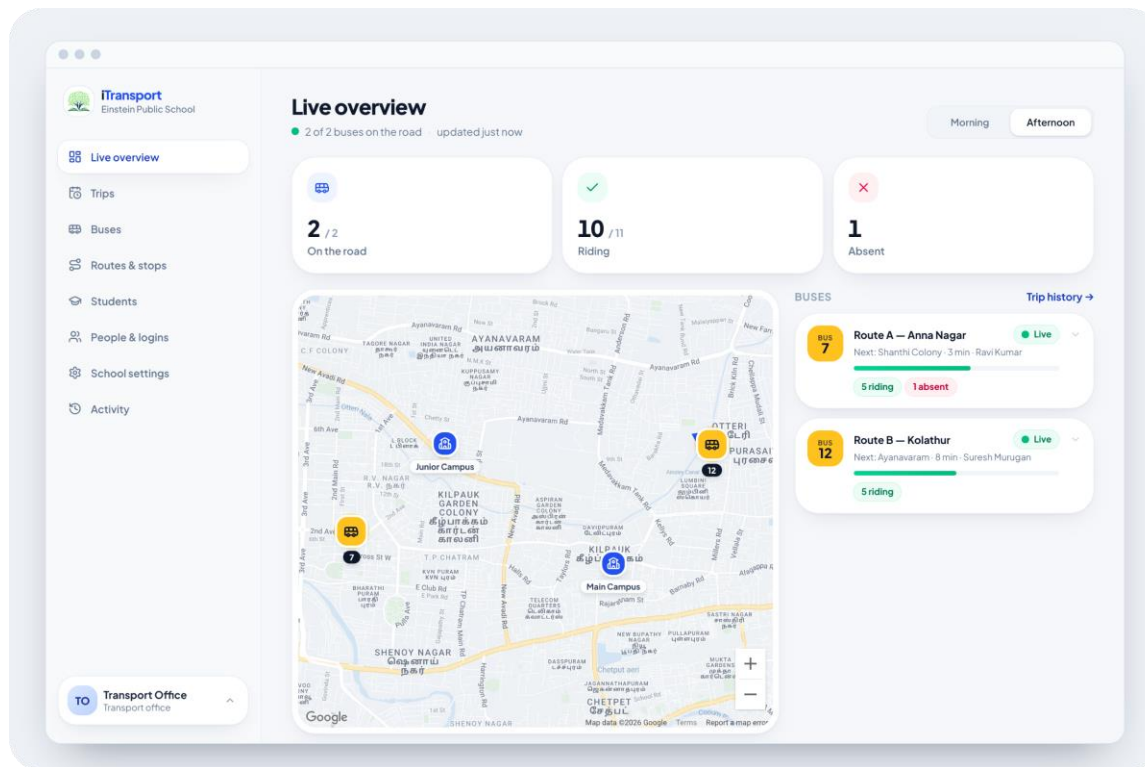

If a phone can't keep the browser open, the office can set up the free Traccar Client app on it instead (see the office's Buses screen).

Transport office

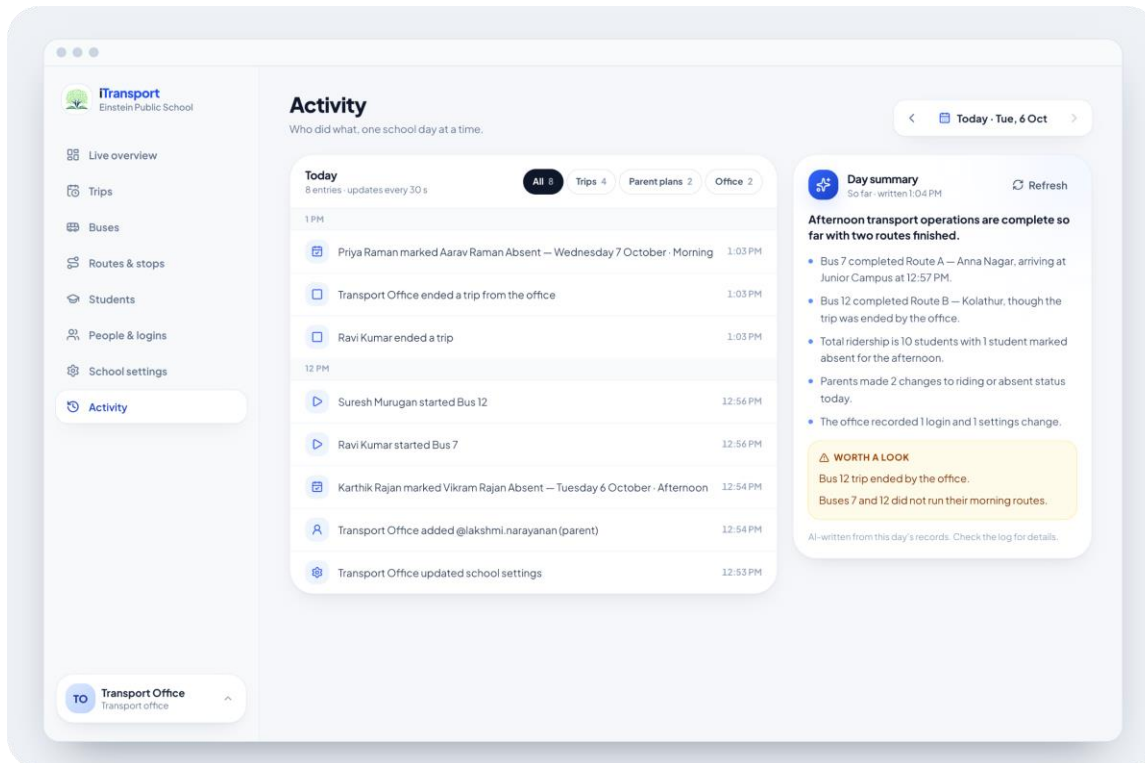

The office screens work best on a computer. The menu on the left holds them all: Live overview, Trips, Buses, Routes & stops, Students, People & logins, School settings and Activity.

Every day

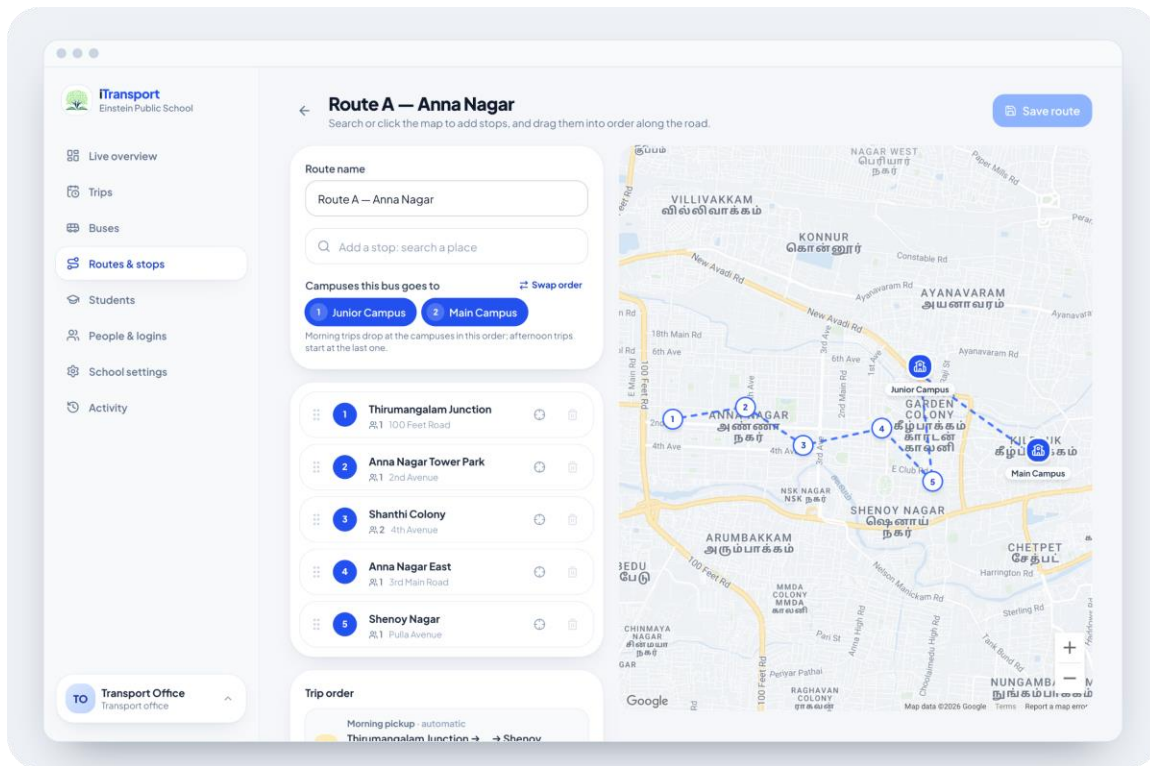

- **Live overview** shows every bus on one map, with counts for **On the road**, **Riding** and **Absent**. Each bus card shows the next stop, the driver and progress; click a card to see its stops. **Signal lost** means the bus has sent no location for 2 minutes.
- **Trips** lists every trip on a chosen date: driver, start and end times, and stops reached. If a driver forgot to end a trip, click **End trip** on its row.
- **Activity** lists one day's events: trips, parents' Riding and Absent changes, and office changes. The **AI Day summary** is written at 8 PM, or click **Summarize today so far** for an earlier read. The summary never sees student or parent names.

First-time setup

Do these once, in this order. Click any row later to edit it.

1. **School settings:** add each campus by searching for it or clicking the map (up to 4). Set the plan cutoffs, how many minutes ahead parents are alerted, school days and holidays, then click **Save changes**.
2. **Routes & stops → New route:** name the route, then add stops by searching or clicking the map. Drag the stops into order and pick the campuses the bus goes to. Check **Trip order**, flip a trip if the bus drives it the other way, and click **Create route**.
3. **Buses → Add bus:** enter the bus number, plate, seats and route. Drivers can't start a trip until the bus has a route.
4. **People & logins → Add person:** enter the name, role (Parent, Driver or Admin) and mobile. For a driver, pick the buses they drive; picking none lets them drive any bus. **Create login** shows a temporary password once, so click **Copy sign-in details** and send them to the person.
5. **Students → Add student:** enter the name and grade, then pick the route, stop, campus and up to 4 parents.

Common tasks

Task	Where
Reset a forgotten password or unlock an account	People & logins → the person → Reset password
Stop a student riding after they leave	Students → the student → turn off Uses the school bus
Add a holiday	School settings → School days & holidays → Add holiday
Take a bus out of service	Buses → the bus → turn off In service
Set up the Traccar Client backup on a bus phone	Buses → the bus → Backup tracker : enter its Server URL and Device identifier in the app, frequency 15 seconds
End a trip a driver forgot	Trips → End trip

Troubleshooting

Most problems show a plain message on screen. Find yours below.

What you see	What it means	What to do
Location paused or Signal lost	The bus hasn't sent its location	Wait; it updates when the

What you see	What it means	What to do
	for 2 minutes, often in a low-signal area	phone reconnects. Drivers: keep iTransport open on screen
≈ and Estimate beside the arrival time	Live traffic data is unavailable, so the time is approximate	Nothing
Waiting for the bus's location...	The trip has started but no location has arrived yet	Wait a minute. Drivers: allow location
The bus has passed your stop	The bus went by without coming close to the stop's pin on the map	If it happens often, ask the office to check the stop's position
No alerts arrive	Alerts are off, or notifications are blocked	Tap Turn on alerts (on iPhone, open iTransport from the Home Screen), then Send a test
Notifications are blocked	The browser blocks iTransport's notifications	Allow notifications for this site in the phone or browser settings
Too many wrong passwords	5 wrong passwords in a row	Wait 15 minutes, or ask the office to reset the password
A lock and Closed at 6:30 AM under a trip	The cutoff for that trip has passed	Call the transport office
No children linked yet or Not on a bus route yet	The office hasn't linked your child or given them a bus	Contact the transport office
No buses assigned to you (drivers)	The office hasn't assigned you a bus	Ask the transport office
